Consumer Price Index for Food and Energy Cleveland-Akron, OH CMSA June 2000

Energy costs in the Cleveland area jumped 17.8 percent in June, the U.S. Department of Labor's Bureau of Labor Statistics reported today. Peter J. Hebein, Regional Commissioner for the Bureau in Chicago, said that two-thirds of the hike was due to sharply higher gasoline prices. The remaining third was attributed to a seasonal gain in electricity costs as utilities moved to higher summer rate schedules.

The cost of food at home (grocery food) edged-up 0.2 percent in June following a sharp 1.3 percent drop in May. Grocery food prices slipped 0.2 percent over the first six months of 2000 and were only 2.2 percent above their level a year ago.

Gasoline prices increased 26.8 percent in June. The cost of regular unleaded rose 27.5 percent; midgrade unleaded increased 26.7 percent; and premium unleaded gasoline rose by 24.6 percent. Over the past 12 months, gasoline prices were up 62.0 percent. Despite these latest gains, gasoline prices fell 9.3 percent over the previous four year period.

Electricity costs advanced 18.0 percent as they have done in June in each of the previous four years. Over the past 12 months, electricity costs were slightly lower by 0.3 percent and have been essentially unchanged over the past four years (June 1996-June 2000). Utility natural gas prices gained 5.3 percent in June and were 13.8 percent higher than a year ago.

Wednesday, August 16, 2000

CPI HOTLINE PROVIDES LATEST INDEXES 24 HOURS A DAY

The all items CPI's for the U. S. City Average and for the Cleveland area are available 24 hours a day, 7 days a week through the Bureau's CPI Hotline service. This recorded message also provides percent changes from a month ago and from a year ago as well as the scheduled release date for the next CPI issuance. The Hotline number in Cleveland is (216) 522-3852.

BLS FAX-ON-DEMAND SERVICE OFFERS CPI DATA 24 HOURS A DAY

If you have a fax machine and a touch-tone telephone, you can order current and historical CPI data and receive it within minutes by fax. The BLS Fax-on-Demand service offers over 280 documents containing the most popular BLS data including more than 65 documents containing CPI data for the nation, four regions, and 30 metropolitan areas. To receive by fax a catalog of documents available on the service, call 312 353-1880, select menu option 1, and when prompted, order document 1000.

BRIEF EXPLANATION OF THE CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 87 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments-- department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels and a few other items are obtained every month in all 87 location. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 26 local area. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each base period.

The index measure prices changes from a designated reference data -1982-84 that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65.

For further details see the BLS Handbook of Methods, Bulletin 2490, April 1997, Chapter 17, The Consumer Price Index.
